Various ways of sterilization are being adopted in the world for this purpose. Steam sterilization is one of the simplest and effective methods of sterilization used for both domestic purposes as well as in hospitals for medical devices. Steam sterilization process takes place at a very high temperature reaching up to 135 degree Celsius for up to thirty minutes. Steam sterilization bags are being developed for fulfilling this purpose of sterilizing the medical devices without allowing direct contact of high-temperature steam with the medical devices. These bags were later developed for sterilizing the baby products like milk bottles, nipples and other such parts which just require some water to be filling in with the baby products and microwave it for ninety seconds.
