Abstracts

The global Steam Sterilizer market size is expected to reach \$ 1213 million by 2032, rising at a market growth of 2.6% CAGR during the forecast period (2026-2032).

This report is about the global steam sterilizer market. Steam sterilizer is a pressure chamber that is used to sterilize equipment and supplies. When placed inside the steam sterilizer, these items are exposed to high temperature steam (usually around 132 degrees Celsius or 270 degrees Fahrenheit) for about twenty minutes. This hot steam will kill germs that simple detergent or boiling water could not. Steam sterilization cycles can be divided into three distinct phases; conditioning, exposure and drying. During conditioning, air is removed from the load and the items in the load are heated to the desired temperature for sterilization. Conditioning is important because if there is any air in the load it may prevent the sterilant from coming into contact with load items, leading to sterilization failure. During exposure, the load is held at a specific temperature for a time known to provide effective sterilization. After exposure, steam is removed from the chamber and the load is dried to prevent recontamination of the instruments through wicking of microorganisms through a wet wrap.

Global Steam Sterilizer key players include STERIS, Shinva, Getinge, BELIMED, Tuttnauer, etc. Global top five manufacturers hold a share about 30%. Europe is the largest market, with a share about 35%, followed by North America, with a share about 30 percent. In terms of product, SFPP is the largest segment, with a share about 45%. And in terms of application, the largest application is Medical & Healthcare, followed by Laboratory, etc.
