According to our (Global Info Research) latest study, the global Steam Temperature Controller market size was valued at US\$ 324 million in 2025 and is forecast to a readjusted size of US\$ 523 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global steam temperature controller production reached approximately 2.09 million units. The steam temperature controller is a specialized device used for temperature monitoring and automatic control in steam heating systems. It mainly detects temperature changes in real time through sensors and automatically adjusts steam flow or pressure to achieve precise constant-temperature control. The device typically features temperature display, automatic adjustment, over-temperature protection, and parameter setting functions, which can effectively improve the stability of heating systems, energy utilization efficiency, and production safety. Steam temperature controllers are widely used in food processing, pharmaceuticals, chemicals, textiles, printing and dyeing, and industrial heating applications, serving as important equipment for automated temperature management and energy-saving control.

The steam temperature controller market has developed steadily amid rising demands for industrial automation, energy-saving production and precise temperature control. As core control equipment in steam heating systems, it is widely used in food processing, pharmaceutical, chemical, textile, printing and dyeing, industrial heating and other fields, enabling temperature monitoring, automatic adjustment and safety protection. Growing pursuit of production efficiency, energy utilization rate and process stability drives increasing demand for temperature controllers with high precision, intelligence, fast response and stable operation. Meanwhile, advances in sensor technology, PLC control, remote monitoring and data analysis promote the upgrading of steam

temperature controllers toward digitalization, integration and energy conservation. The market will maintain steady growth in the future. Industrial competition will focus on temperature control accuracy, system compatibility, safety performance, intelligent control capability and after-sales service quality.
