Stearic acid foam stabilizer is a surfactant with stearic acid or its derivatives (such as stearates and esters) as the main component. It has good foam stability and is often used in chemical or daily chemical formulations that need to form long-lasting foam. Its molecular structure contains both hydrophilic groups and long hydrophobic chains, which can effectively reduce the surface tension of the liquid and enhance the toughness of the foam film, thereby extending the foam life and improving the uniformity and stability of the foam. Stearic acid foam stabilizer is widely used in detergents, washing products, cosmetics, metal cleaning fluids, concrete foaming agents and other products. It has both foaming and emulsification auxiliary functions and is an important additive for regulating foam performance.

This report is a detailed and comprehensive analysis for global Stearic Acid Foam Stabilizer market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
