The global Steel for Oil Well Pipe market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Steel for oil well pipes must have special characteristics to withstand the harsh conditions of oil drilling and production. The most commonly used steel grade for oil well pipe is API J55, which is a low carbon steel with high corrosion resistance and good tensile strength. Other grades commonly used for oil well pipelines include API grade N80 and L80, which have high strength and toughness. In addition to these grades, oil well tubing can also be made of alloy steel, which is specially prepared to provide additional strength and corrosion resistance. The specific grade of steel used for oil well pipelines will depend on the specific requirements of the oil well and its operating conditions.
