According to our (Global Info Research) latest study, the global Steel Band Saw Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Steel band saw machine is a kind of mechanical equipment for cutting steel, and its basic principle is to use the band saw blade to cut steel through sawteeth while rotating at high speed. Structural steel band saw has high cutting efficiency, high precision and flat cutting surface, which is suitable for cutting various shapes of steel, such as pipe, angle steel, channel steel, H-beam steel, etc.

Structural steel band saw is composed of machine tool body, transmission system, lubrication system and control system. The main body of the machine tool adopts steel plate welding structure, which has the characteristics of good rigidity, small vibration and high stability. The transmission system is composed of motor, reducer, pulley, transmission belt and other components, and the band saw blade rotates at high speed through the pulley to achieve rapid cutting of steel. Lubrication systems are used to lubricate band saw blades, reducing wear and extending service life. The control system can realize accurate control of cutting speed, cutting angle, cutting depth and other parameters through computers, digital displays and other equipment.

Structural steel band saws are widely used in construction, bridges, ships, machinery manufacturing and other industries to achieve precise cutting of various steels. Its use not only improves steel cutting efficiency and precision, but also reduces labor intensity and improves work safety.
