The global Steel Bar for Prestressed Concrete market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Steel Bar for Prestressed Concrete refer to steel rods for prestressed concrete, steel rods for concrete products using prestressed technology. Steel rods for prestressed concrete are made of low-alloy steel hot-rolled circular rods that are cold-processed, heated by high-frequency induction, and quenched to form a solid steel rod. Troostite structure, and then tempered by medium frequency induction heating to form a finished product with tempered troostite structure. Prestressed steel rods are intermediate-strength steel materials with high tensile strength, low relaxation, strong grip with concrete, good weldability, upsetting properties, and material saving.
