Abstracts

The global Steel Bonding Adhesive market size is expected to reach \$ 1939 million by 2032, rising at a market growth of 10.2% CAGR during the forecast period (2026-2032).

Steel bonding adhesive, also known as structural adhesive, is a high-performance adhesive used for strengthening and bonding concrete, steel structures, and composite materials. The average price of steel bonding adhesive is around 225 RMB per kilogram, with a global production of approximately 29,000 tons in 2025. It mainly consists of epoxy resin, curing agents, fillers, and additives, featuring high strength, good toughness, durability, and ease of application. Steel bonding adhesive is widely used in the reinforcement of bridges, buildings, tunnels, and industrial plants, especially for bonding steel plates, rebar, and carbon fiber reinforced composites. Its upstream industry includes the production of base chemical materials such as epoxy resin, polyurethane, and acrylic, as well as suppliers of additives and fillers. The downstream applications cover construction reinforcement companies, bridge strengthening projects, concrete repair works, and steel structure plant reinforcement. Steel bonding adhesive not only enhances structural load-bearing capacity but also extends the service life of buildings, making it an essential material in modern structural reinforcement.

This report studies the global Steel Bonding Adhesive production, demand, key manufacturers, and key regions.
