Abstracts

The global Steel Cold Heading Machine market size is expected to reach \$ 1380 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

In 2025, global Steel Cold Heading Machine production reached approximately 10,000 sets, with an average global market price of around USD 98,000 per set.

The gross profit margin of major companies in the industry is between 18.72%-32.64%.

In 2025, the global production capacity of Steel Cold Heading Machine was approximately 13,158 sets.

Steel Cold Heading Machine is a metal forming machine used to shape steel wire or bar stock into fasteners and precision components at room temperature through upsetting, extrusion and multi-station forming. It improves material utilization, dimensional consistency and production efficiency compared with cutting-based machining. The product is mainly used for screws, bolts, nuts, rivets, pins, automotive fasteners, construction fasteners and machinery parts. The market scope includes single-die, multi-station and high-speed cold heading machines for steel materials, but excludes hot forging presses, ordinary stamping machines and wire drawing equipment.

The industry chain includes castings, steel frames, crankshafts, bearings, gears, feeding systems, dies, cutters, control systems, lubrication units, motors and electrical components. Midstream production involves machining, heat treatment, precision assembly, die matching, control integration, testing and commissioning. Downstream demand comes from fastener manufacturing, automotive parts, machinery components,

construction hardware, electronics hardware and industrial standard parts. Growth is linked to infrastructure investment, automotive production, equipment replacement, high-strength fastener demand and automation upgrading in metal forming plants.

Fastener manufacturing, automotive metal fittings and standard component processing drive technical iteration of steel cold heading machines. Cold forming technology saves raw materials and guarantees consistent workpiece dimensional precision. Variable frequency drive and automatic feeding design boost continuous production efficiency.
