## Abstracts

The global Steel Cord Belt Cutter market size is expected to reach \$ 1917 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032). Steel Cord Belt Cutter is a specialized industrial machine used in the production and maintenance of steel cord conveyor belts, it is mainly used to produce belt cord and carcass cord of all-steel and semi-steel radial tires, and is one of the main equipment for tire manufacturing. In 2025, global Steel Cord Belt Cutter production reached approximately 8,959 units, with an average global market price of around 142 K US\$/Unit. The production capacity of Steel Cord Belt Cutter reaches 11,200 units, and the industry's gross profit margin is approximately between 20% and 40%.

The market demand for steel cord belt cutters continues to grow, mainly driven by multiple factors such as the global tire industry upgrade, the surge in demand for high-performance radial tires from new energy vehicles, the popularization of intelligent manufacturing and automated production lines, and the substitution of imports by domestically produced high-end equipment. As electric vehicles place stringent requirements on tires for low rolling resistance, high load-bearing capacity, and long lifespan, steel cord fabric, as the core material of the belt layer and tire bead, directly affects tire performance in terms of cutting accuracy, tension control, and production efficiency, prompting tire manufacturers to accelerate the upgrading of high-precision, high-stability, and intelligent cutting equipment.

This report studies the global Steel Cord Belt Cutter production, demand, key manufacturers, and key regions.
