## **Abstracts**

According to our (Global Info Research) latest study, the global Steel Corrosion Inhibitor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Steel corrosion inhibitors are chemical compounds or coatings designed to prevent or mitigate the corrosion of steel and other metals. Corrosion is a natural process that occurs when metals, like steel, react with their environment, often leading to the deterioration of the metal's properties and structural integrity. Corrosion inhibitors work by either forming a protective barrier on the metal surface or by altering the electrochemical reactions that cause corrosion.

The global steel corrosion inhibitor market has been witnessing steady growth due to the increasing need for corrosion protection across various industries. Corrosion of steel and other metals can result in significant economic losses, safety concerns, and environmental impacts. Investments in infrastructure projects, such as bridges, highways, and water treatment facilities, have been driving the demand for steel corrosion inhibitors. These inhibitors help protect critical infrastructure assets and reduce maintenance costs. North America, particularly the United States, has a mature corrosion protection market. Investments in infrastructure and the presence of major industries drive the demand for inhibitors. European countries emphasize corrosion protection for their aging infrastructure. The automotive and construction industries also contribute significantly to the market. Emerging economies in Asia, such as China and India, are experiencing rapid urbanization and infrastructure development. This has led to a growing demand for corrosion inhibitors in the region.
