Steel Crane Mat is a load-bearing pad specially used under cranes, heavy machinery or other industrial equipment, usually made of steel or reinforced metal materials. Its main function is to provide solid support, disperse the weight of the equipment, prevent ground subsidence or damage, and protect the stability and safety of the equipment. Steel Crane Mat is widely used in construction sites, mines, ports and other environments that need to carry heavy equipment. Due to its high strength, wear resistance and durability, this mat can effectively cope with the huge pressure and friction generated by the crane during work.
