The global Steel Encapsulated Raised Access Floor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Steel encapsulated raised access floor is a type of raised access floor that is constructed with a steel base and encapsulated with a layer of cementitious material, making it highly durable and long-lasting. The steel base provides strength and stability, while the cementitious material provides a hard, smooth surface that can be finished with a variety of flooring materials. One of the main benefits of a steel encapsulated raised access floor is its ability to withstand heavy loads and high traffic. The steel base provides superior strength and support, making it ideal for use in areas such as data centers, server rooms, and other industrial and commercial settings.
