The global Steel Fiber Reinforced Polyethylene Composite Pressure Pipe market size is expected to reach \$ 633 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Steel fiber-reinforced polyethylene composite pressure pipe (SFRCP) is a composite pipe made with high-density polyethylene (PE) as the inner and outer layers, and an intermediate layer consisting of a continuously spirally wound mesh structure of ultra-fine, high-strength steel fibers (diameter

The upstream core raw materials include high-density polyethylene (HDPE) resin, high-strength steel wire, and critical interlayer bonding resin. The molecular weight distribution of HDPE directly affects the long-term stress crack resistance of the pipe, while the peel strength of the hot-melt adhesive is crucial in determining the quality of the steel-plastic composite and preventing delamination between layers, representing a significant technological barrier.

Global sales are projected to reach millions of meters by 2025, with product market prices ranging from \$15 to \$60 per meter. Industry gross margins are expected to be in the 20%-30% range.
