## Abstracts

According to our (Global Info Research) latest study, the global Steel Mesh Welding Production Line market size was valued at US\$ 119 million in 2025 and is forecast to a readjusted size of US\$ 120 million by 2032 with a CAGR of 0.1% during review period.

The steel mesh welding production line is an automated process that integrates rebar straightening, cutting, routing, welding, and finished product output. Precision control ensures product quality and improves production efficiency. The line, consisting of a rebar feeding mechanism, straightening device, welding machine, and shearing unit, enables continuous processing from raw material to finished mesh. Customizable rebar meshes with varying diameters, spacing, and shapes are available. Widely used in building floor slabs, road reinforcement, and precast concrete components, it combines high efficiency with high precision. Annual sales of this product are approximately 700 units, with an average price of approximately US\$160,000 per unit.

In recent years, the global steel mesh welding production line industry has seen a slowdown in growth due to multiple factors. In China, adjustments in the real estate industry have weakened demand for traditional construction steel mesh. Coupled with a temporary slowdown in infrastructure investment growth, the industry's overall growth rate has declined significantly compared to previous years. Despite this, China, with its comprehensive industrial chain and scale advantages, maintains strong competitiveness in the international market for mid-range equipment. Globally, the European and American markets, dominated by high-end equipment, have seen relatively stable demand, but growth potential is limited due to economic slowdowns and the impact of manufacturing reshoring policies. Meanwhile, emerging markets such as Southeast Asia and the Middle East are benefiting from accelerated infrastructure

construction, driving global demand growth.

In the short term, due to weak real estate demand and slowing growth in traditional infrastructure construction, the overall growth rate of the steel mesh welding production line industry is expected to remain low. However, structural opportunities still exist: the construction of emerging application areas such as new energy, marine engineering and municipal pipelines will drive the upgrading of equipment towards high-performance directions such as high strength and corrosion resistance; at the same time, under the trend of Industry 4.0 and low-carbon manufacturing, intelligent welding production lines and energy-saving equipment will become the core direction of technological upgrading; in terms of overseas markets, infrastructure demand in Southeast Asia, Africa and other regions continues to be released, providing an important export growth point for China's cost-effective equipment; in addition, the industry integration process is accelerating, market concentration is increasing, and leading companies with technological and brand advantages will further strengthen their market position through innovative research and development and global layout.
