The global Steel Plant Fire Protection System market size is expected to reach \$ 4002 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Steel plant fire protection systems are integrated safety solutions designed to prevent, detect, and suppress fires in steel manufacturing facilities, particularly in high-risk areas such as blast furnaces, continuous casting lines, hot rolling mills, and material handling zones. These systems typically include fire detection, alarm, suppression, and control components tailored to extreme heat, dust, and combustible materials. In 2025, the average selling price of steel plant fire protection systems is approximately US\$420,000 per system, with global sales volume reaching around 6,200 systems. The industry maintains a gross margin of 35%–55%, supported by high system integration requirements, regulatory compliance, and long-term service contracts.
