Abstracts

The global Steel Roofing market size is expected to reach \$ 14470 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

In 2024, global steel roofing material production reached 2.492 million tons, with an average selling price of US\$3,850 per ton.

Steel roofing materials emerged to address the problems of traditional roofing materials (bricks, tiles, concrete, etc.) such as heavy weight, low construction efficiency, poor durability, and insufficient thermal insulation. Since the acceleration of industrialization in the mid-20th century, steel roofing materials have gradually developed into a mainstream roofing decoration and protection material system encompassing various materials and structural forms, widely used in industrial plants, public buildings, and residential buildings, and possessing advantages such as lightweight, high strength, ease of construction, and recyclability.

In 2024, the annual production capacity of single-line steel roofing materials in small and medium-sized steel structure enterprises was generally 80,000-150,000 tons, while leading enterprises such as China Baowu Steel Group had a production capacity of over 3 million tons. The industry's average capacity utilization rate was approximately 72%, which could rise to 85% during peak global infrastructure investment periods. Gross profit margins vary significantly depending on product positioning: ordinary color steel sheets are approximately 12%-18%, high-end aluminum-magnesium-manganese alloy sheets and supporting systems can reach 18%-25%, and stainless steel roofing materials have a gross profit margin of approximately 25%-32%.
