The global Steel Shell Feeder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The steel shell feeder is a device used to automatically feed steel shells to the production line. The steel case is the shell part of the battery. The steel case feeder automatically removes the steel case from the storage area or the conveyor belt and places it in a designated position to meet the production line's demand for steel cases. This kind of equipment usually has the advantages of high automation, high production efficiency, and simple operation, which can greatly improve the production efficiency and product quality of the battery production line. Steel shell feeders are widely used in battery manufacturing, electronics, automobiles and other industries.
