Steel sprocket is a common type of chain wheel, mainly made of high-quality alloy steel, with high strength, good wear resistance and other characteristics, and widely used in various transmission systems. Steel sprockets are usually made of high-quality alloy steel, which undergoes specific heat treatment processes such as quenching and tempering to significantly improve their hardness and wear resistance. Specifically, the hardness of steel sprockets can typically reach HRC45-50, which enables them to maintain stable performance in high load and high-speed transmission environments.
