According to our (Global Info Research) latest study, the global Steel Strip Electrostatic Oiling Machine market size was valued at US\$ 124 million in 2025 and is forecast to a readjusted size of US\$ 170 million by 2032 with a CAGR of 4.4% during review period.

In 2025, global Steel Strip Electrostatic Oiling Machine production reached approximately 650 units, with an average global market price of around 185,000 USD/unit.

A Steel Strip Electrostatic Oiling Machine is a specialized industrial equipment used in steel processing, which employs electrostatic principles to atomize oil particles and apply a controlled, uniform oil film on the surface of steel strips; it minimizes oil waste, enhances the steel strip's corrosion resistance and lubricity, reduces friction during subsequent processing, and ensures stable performance of steel strips in storage, transportation and further manufacturing procedures, serving as an essential component in modern steel production lines.

Demand for Steel Strip Electrostatic Oiling Machines is driven by the steady growth of global steel production, stringent environmental regulations promoting oil-saving and low-pollution equipment, and the expanding demand for high-precision steel strips in automotive, electrical and construction industries, with increasing preference for high-automation, high-oiling accuracy and eco-friendly models; business opportunities lie in the R&D of intelligent control systems integrated with IoT technology, customization of machines for different steel strip specifications, mass production of cost-effective models for emerging industrial regions, and upgrading of existing equipment to meet green production standards, while the development of high-end precision steel

processing further boosts the demand for high-performance electrostatic oiling machines.
