A steel timing pulley, also known as a toothed pulley, is a mechanical element used in a transmission system. It usually consists of a steel pulley and a timing belt, used to transmit power and motion, and is usually used in industrial equipment that requires high transmission accuracy. The main feature of the steel synchronous pulley is that it has a special tooth profile on the pulley, which can be fitted with the tooth profile of the synchronous belt to achieve precise transmission. They are typically used in applications requiring precise synchronized motion of drive trains, such as mechanical equipment, automated production lines, printers, packaging machines, textile machinery, etc. The advantages of steel synchronous pulleys include high efficiency, high transmission precision, smooth motion, low noise, and long life. The material of steel timing pulleys is usually made of high-strength steel to ensure its durability and resistance to wear.
