Steel Tongue Drum is a modern percussion idiophone with a hollow convex metal cavity as the main body, and metal tongues of different lengths and widths cut and fixed on the surface, each tuned to a specific pitch; it can produce clear, resonant and ethereal tones when struck by hands or mallets, is usually adjusted to pentatonic scale with the characteristics of easy operation and portability, and its prototype can be traced back to the whale drum and Tambiro, with the modern version innovatively developed on the basis of propane tank transformation in the early 2000s, and is widely used in meditation, sound healing, outdoor performance and music education fields.

Driven by the global rise of healing economy and the growing demand for mental relaxation, the market demand for Steel Tongue Drum is expanding rapidly, especially the rising purchase needs from music lovers, yoga practitioners, sound therapy institutions and educational organizations and the Asia-Pacific region becoming the largest consumption market; the business opportunities are concentrated in multiple aspects, including the R&D and production of high-quality products with stable intonation and diverse materials, the launch of personalized customized services such as custom scales and appearance carving, the integration of electronic technology to develop MIDI-connected electronic steel tongue drums for modern music creation, the expansion of online sales channels for convenient purchase, and the in-depth cooperation with meditation and art therapy institutions to explore scenario-based application modes, while optimizing product quality and design differentiation can effectively break the current industry problems of homogeneous appearance and unstable intonation and seize more market share.
