Steel wire braided resin pipe is a pipe woven from steel wire and high-strength resin material. It has excellent pressure resistance and wear resistance and is widely used in high-pressure transmission environments, such as hydraulic systems, industrial machinery, automobiles, and engineering machinery. Compared with fiber braided pipes, steel wire braided resin pipes have stronger tensile and high pressure resistance, and can maintain stability under high temperature and harsh conditions. Therefore, it is suitable for workplaces that require high strength, corrosion resistance, and flexibility. This type of pipe usually consists of a multi-layer structure: the inner layer is a resin lining, which provides good chemical corrosion resistance; the middle layer is a steel wire braided layer to enhance pressure resistance; the outer layer is a protective layer to increase wear resistance and anti-aging ability.
