Abstracts

The global Steering Columns System market size is expected to reach \$ 19000 million by 2032, rising at a market growth of 1.9% CAGR during the forecast period (2026-2032).

Steering Columns System is a device intended primarily for connecting the steering wheel to the steering mechanism or transferring the driver's input torque from the steering wheel. The steering column consists of a collapsible housing containing a collapsible rotating shaft. The steering column is connected to the input shaft of the steering gear by a flexible joint. This allows the alignment, and reduces the transmission of road shocks back to the driver. Some of the steering columns have an intermediate shaft, which runs at about an oblique angle, from the column to the steering gear. Some manufacturers fit sensors and control units to the steering column, that provide information to steering control modules as part of an electric assisted or 4-wheel steering system.

The major players in global Steering Columns System market include Bosch, JTEKT, ThyssenKrupp, etc. The top 3 players occupy about 40% shares of the global market. Europe and China are main markets, they occupy about 50% of the global market. Manually Adjustable Steering Columns is the main type, with a share about 65%. Passenger Vehicle is the main application, which holds a share about 80%.
