The steering rack quenching machine is a special equipment used to quench the rack components in the automobile steering system. By adopting technologies such as induction heating or flame heating, the equipment can accurately control the depth and hardness distribution of the hardened layer on the rack surface, thereby improving the wear resistance, strength and service life of the rack. Its structure usually includes a workpiece clamping system, a quenching heating system, a cooling system and a CNC operating system, which is suitable for mass production needs. With the growing demand for high-performance steering systems in the automotive industry, steering rack hardening machine tools have been widely used in the market, and the technology has been gradually upgraded to meet the requirements of precision and efficiency.
