The global Steering Wheel Control Harness market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The global automotive wiring harness market is expected to grow from USD 47.0 billion in 2021 to USD 57.4 billion in 2026, at a CAGR of 4.1% during the forecast period. The scope of the study considers wiring harnesses as bundles of wires that perform various functions, such as data transmission and the transmission of signals, data and power within a vehicle through wires. Demand for high-speed data transmission wiring harnesses has also increased recently and is expected to pick up further as the number of electronic functions increases. The Asia-Pacific region is still the main market for automotive wiring harnesses, although the demand in Europe and North America is also increasing. Steering wheel control wiring harnesses are very important components in automotive steering systems. Therefore, the market for steering wheel control wiring harnesses is estimated to grow at a high speed.

The car steering wheel control interface refers to the system connecting the steering wheel and the steering gear, which can convert the rotation signal of the steering wheel into a signal to control the steering of the car
