According to our (Global Info Research) latest study, the global Steering Wheel Torque and Angle Sensor market size was valued at US\$ 2638 million in 2024 and is forecast to a readjusted size of USD 3839 million by 2031 with a CAGR of 5.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The Steering Angle Sensor (SAS) determines the direction the driver wants to turn, matching the steering wheel to the wheels. The steering angle sensor is located within the steering column, always packaging multiple sensors into a single unit for redundancy, accuracy and diagnostics. The steering torque sensor is used to detect the force exerted by the driver on the steering wheel. It works like a torsion bar in that it twists slightly when the driver turns the steering wheel/steering shaft.
