## Abstracts

The global Stem Cell Therapy for Osteoarthritis market size is expected to reach \$ 324 million by 2032, rising at a market growth of 29.2% CAGR during the forecast period (2026-2032).

OA is the most common degenerative joint disease. Its initial symptoms include loss of articular cartilage followed by progressive joint stiffness, swelling, pain, and loss of mobility. The prevalence rate of OA is extremely high, affecting more than 250 million people worldwide. With increases in the aging and obese populations, the prevalence of OA is predicted to increase to 67 million by 2030. Hence, an effective and safe OA treatment is urgently required.

Stem cells are the body's raw materials ? cells from which all other cells with specialized functions are generated. Under the right conditions in the body or a laboratory, stem cells divide to form more cells called daughter cells. These daughter cells either become new stem cells (self-renewal) or become specialized cells (differentiation) with a more specific function, such as blood cells, brain cells, heart muscle cells or bone cells. No other cell in the body has the natural ability to generate new cell types.

The key players of Stem Cell Therapy for Osteoarthritis include Medipost, Theracell Advanced Biotechnology, Nature Cell and Stempeutics. The top 2 manufacturers hold approximately 84% of the global market share.

In terms of product type, Fat Cell is the largest segment, with a share of 94%. And in terms of application, Primary Osteoarthritis has a share about 91 percent.
