According to our (Global Info Research) latest study, the global Stepper Servo Drive market size was valued at USD 1390.1 million in 2022 and is forecast to a readjusted size of USD 1819.9 million by 2029 with a CAGR of 3.9% during review period.

tepper drives provide simple and accurate control of position and speed by converting pulsed control signals from a PLC or other indexers/motion controllers into the appropriate voltage and current needed to drive a stepper motor. A common control method supported by stepper drives is step and direction control, where one signal determines when a motor rotation or 'step' is to be performed and the other determines the direction of the motion. Stepper drives often employ advanced microstepping technology in order to smooth the motor motion and stepping response.
