Abstracts

The global Stepper Servo Drive market size is expected to reach \$ 1819.9 million by 2029, rising at a market growth of 3.9% CAGR during the forecast period (2023-2029).

tepper drives provide simple and accurate control of position and speed by converting pulsed control signals from a PLC or other indexers/motion controllers into the appropriate voltage and current needed to drive a stepper motor. A common control method supported by stepper drives is step and direction control, where one signal determines when a motor rotation or 'step' is to be performed and the other determines the direction of the motion. Stepper drives often employ advanced microstepping technology in order to smooth the motor motion and stepping response.
