## Abstracts

The global Stepping Boiler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market prospect for the Stepping Boiler appears promising due to its energy-saving features, improved water boiling process, and safety functions. As consumers become more conscious of energy efficiency and environmental sustainability, the Stepping Boiler's ability to significantly reduce repeated heating and energy waste can be a significant selling point. The continuous water production feature and accurate temperature control also provide convenience and reliability. Additionally, the Stepping Boiler's safety functions such as leakage protection and anti-dry burning enhance consumer trust. With the growing demand for efficient and safe water heating equipment, the Stepping Boiler has the potential to gain market traction, especially in households, offices, and other settings where hot water supply is essential.

The Stepping Boiler is an energy-saving water heating equipment that is heated step by step by layer by layer from the bottom water, and gradually heated until the water is boiled. Can improve the separation of hot and cold water and ensure a healthy boiling water, alleviate the 'Yin water' generation degree, electric energy control to ensure only one boiling, so as to completely avoid repeated heating; After 1 liter of water is heated and boiled, 1 liter of water is heated from the bottom until the tank is full, and the stepping water boiler can continuously produce water, avoiding the waiting time of the traditional water boiler after the whole tank of water is boiled. The traditional water boiler relies on steam expansion from the heating box to the incubator, which is equivalent to countless boiling; The stepping water boiler relies on electrode temperature measurement, temperature control is accurate, and the water temperature is constant at 96-99 degrees; Electronic leakage protection alarm function, electronic temperature

control to prevent dry burning without water, anti-overflow water leakage function.
