## Abstracts

The global Stereo Vision Camera market size is expected to reach \$ 296.8 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

With the improvement of computing power and optimization of algorithms, Stereo Vision Camera may have new breakthroughs in data processing and image quality improvement. For example, with more efficient algorithms and finer image parsing, Stereo Vision Camera may produce 3D images with a greater sense of depth and clarity. In addition, with the development of 5G and the Internet of Things (IoT), Stereo Vision Camera may be widely used in sensing and navigation in smart devices, autonomous vehicles, drones, etc.

A Stereo Vision Camera is a type of camera with two or more lenses with a separate image sensor or film frame for each lens. This allows the camera to simulate human binocular vision, and therefore gives it the ability to capture three-dimensional images, a process known as stereo photography.
