## Abstracts

According to our (Global Info Research) latest study, the global Sterile Absorbable Hemostatic Gelatin Sponge market size was valued at US\$ 1183 million in 2025 and is forecast to a readjusted size of US\$ 1536 million by 2032 with a CAGR of 4.1% during review period.

Sterile Absorbable Hemostatic Gelatin Sponges are pre-sterilized, bioresorbable surgical hemostats made from purified gelatin to control bleeding at operative or traumatic sites. Their porous matrix rapidly absorbs blood, concentrates platelets and clotting factors, and provides a scaffold that accelerates clot formation. The sponge can be cut and conformed to irregular tissue surfaces, used alone or combined with thrombin for stronger hemostasis. It is designed to be gradually absorbed by the body, reducing the need for removal. Key requirements include sterility assurance, low endotoxin, predictable absorption time, controlled swelling, biocompatibility, and consistent pore architecture for reliable performance.

The industrial chain of Sterile Absorbable Hemostatic Gelatin Sponges includes upstream inputs such as medical-grade gelatin, purification chemicals, water for injection, sterile barrier packaging, sterilization consumables, and labeling materials. Midstream manufacturing covers gelatin solution preparation, foaming or freeze-drying to create porous structures, molding/cutting, drying, sterilization (gamma/EO), packaging sealing, and QC testing for sterility, endotoxin, absorbency, and mechanical integrity. Downstream users include hospitals, operating rooms, surgical centers, and medical distributors. Services include clinical training, regulatory documentation support, post-market surveillance, and sterile logistics assurance.

Small dental cubes typically fall around \$0.5–\$2.0 per piece. Standard OR sheets/blocks are commonly \$20–\$40 per piece, while larger formats or premium branded packs can reach \$80–\$120 per piece. The gross profit margin of major companies in the industry is between 10% – 30%.
