## Abstracts

The global Sterile Single-Use Syringes market size is expected to reach \$ 19209 million by 2032, rising at a market growth of 3.3% CAGR during the forecast period (2026-2032).

Sterile Single-Use Syringes refers to a medical device of the syringe type that is manufactured under clean conditions, sterilized, and designed for one-time use. It usually consists of a cylinder, piston, and push rod, and can be matched with injection needles or Luer connectors for drug extraction, preparation, and injection administration. After use, it is disposed of according to infectious medical waste standards to reduce the risk of cross infection and improve clinical drug safety. Its product form can cover ordinary disposable syringes, self destruct syringes for immunization, and safety syringes with anti puncture structures. In 2025, global Sterile Single-Use Syringes production reached approximately 15,873 M Units, with an average global market price of around US\$ 925 per k unit.

Aseptic disposable syringes are typical high-frequency rigid consumables, and their demand base is determined by the volume of medical services, chronic disease medication, and immunization scale. Overall, they exhibit stable growth but highly competitive large-scale characteristics. The structural changes in the industry mainly come from two aspects. Firstly, the requirements for infection control and occupational exposure management have been raised, which has led to an increase in the proportion of safety syringes and self destruct syringes, resulting in an increase in product unit price and added value. At the same time, it has also raised the requirements for injection molding accuracy, sliding performance consistency, and sterilization verification; Secondly, cost control and centralized procurement mechanisms in various countries continue to put pressure on basic payment prices, and enterprises rely more on production capacity, automated manufacturing, cost control of raw materials and sterilization, and global supply chain delivery capabilities to gain market share. Future

opportunities will focus more on the penetration of safety products, expansion of pre filled syringes and supporting systems, and large-scale stable supply capabilities for public health projects, while low-end homogeneous products will face long-term price competition and profit contraction pressure.
