## Abstracts

According to our (Global Info Research) latest study, the global Sterilization and Depyrogenation Equipment market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Depyrogenation is the process of removing pyrogens. The most prevalent and problematic pyrogens are bacterial endotoxins found in the outer cell walls of Gram-negative bacteria. Therefore, depyrogenation is a process that destroys or removes bacterial endotoxins. Products may accumulate pyrogens from raw materials or other parts of the manufacturing process. The best pyrogen removal or destruction process depends on the product. Standard depyrogenation methods are dry heat, rinse and filter.
