A stern drive boat propeller is a propulsion device installed at the stern of a vessel, providing propulsion through a combined unit that combines an engine and a transmission system. It is usually used in conjunction with an inboard engine, with the engine power transmitted to the propeller through a drive shaft. Unlike traditional inboard propulsion systems, the biggest feature of a stern drive boat propeller is its adjustability, which allows the entire propeller unit to rotate underwater, thereby changing the direction of thrust and providing better controllability and maneuverability.
