According to our (Global Info Research) latest study, the global Stirrup Bending Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A stirrup bending machine is a mechanical device used in construction and steel fabrication to automate the process of bending reinforcement bars, specifically stirrups. Stirrups are widely used in reinforced concrete structures to enhance their strength and resistance to external forces. The machine accepts straight bars as input, and through a combination of bending mechanisms, it can produce stirrups of various shapes and sizes based on the specific design requirements. The Stirrup Bending Machine improves efficiency and accuracy in the production of stirrups, saving time and labor compared to manual bending methods.
