## Abstracts

The global Stirrup Bending Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A stirrup bending machine is a mechanical device used in construction and steel fabrication to automate the process of bending reinforcement bars, specifically stirrups. Stirrups are widely used in reinforced concrete structures to enhance their strength and resistance to external forces. The machine accepts straight bars as input, and through a combination of bending mechanisms, it can produce stirrups of various shapes and sizes based on the specific design requirements. The Stirrup Bending Machine improves efficiency and accuracy in the production of stirrups, saving time and labor compared to manual bending methods.
