## Abstracts

The global Stitching Panoramic Network Camera market size is expected to reach \$ 445 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

In 2025, the global production of panoramic network cameras reached 2.1721 million units, with an average selling price of US\$150 per unit. The global annual production capacity of panoramic network cameras is approximately 3 million units, with a gross profit margin of approximately 26.3%. Panoramic network cameras are advanced surveillance devices capable of capturing panoramic images of the surrounding environment through multiple lenses. Unlike traditional surveillance cameras, these cameras can stitch together images captured by various lenses in real time to form a panoramic image without blind spots, providing a wider field of view and thus improving monitoring effectiveness. The upstream of panoramic network camera production includes optical lenses, CMOS image sensors, and DSP chips. The midstream consists of panoramic network camera manufacturers, while downstream applications are mainly in the security, video conferencing, and transportation industries.

The panoramic network camera market is currently experiencing rapid growth, with technological advancements and demand driving industry transformation. On the consumer side, with the increasing demand for social media content creation, lightweight, intelligent, and low-cost panoramic network cameras have become a popular choice for ordinary users to record their lives and share immersive experiences. Ease of operation and lowered content creation barriers have further expanded the user base. In the professional field, these devices are widely used in security monitoring, smart cities, film and television production, industrial inspection, and virtual real estate viewing. The demand for high resolution, high stability, real-time stitching, and intelligent

analysis functions continues to rise, driving products towards higher performance and greater specialization. In terms of market competition, leading companies consolidate their advantages through technology patent layout, ecosystem building, and in-depth application scenario development. Meanwhile, emerging companies participate in the competition through differentiated positioning or cost-effectiveness strategies, resulting in a market structure evolving from a 'one-superpower-many-strong' to a more diversified competitive landscape. Overall, the panoramic network camera market is in a golden period of accelerated technological iteration and expanded application scenarios, with enormous future development potential.
