Abstracts

The global Stone Floor Maintenance Robot market size is expected to reach \$ 44.53 million by 2032, rising at a market growth of 24.9% CAGR during the forecast period (2026-2032).

In 2025, global sales of Stone Floor Maintenance Robot reached approximately 300 units, with an average market price of about USD 26000?29000 unit, an annual production capacity of roughly 350 units, and an industry-average gross margin of approximately 40%.

Stone Floor Maintenance Robots are autonomous or semi-autonomous mobile equipment designed for the maintenance of installed stone flooring in commercial buildings, public facilities, transportation hubs, hotels, office buildings, hospitals, exhibition venues and similar high-traffic environments. A typical system integrates a robotic mobile platform, navigation and localization, path planning, obstacle avoidance and safety sensing, brush or polishing pad control, pressure regulation, chemical dosing, cleaning or recovery modules, and digital task management functions. By combining autonomous movement, controlled polishing pressure, quantified chemical application, route coverage and operational data recording, these robots convert traditionally labor-intensive stone crystallization, polishing, light restoration, de-waxing and routine floor care into a more standardized, repeatable and traceable maintenance process. This study focuses on professional robotic equipment used for post-installation stone floor care, with primary flooring materials including marble, granite, engineered stone and terrazzo, and with major end users including facility management companies, cleaning service contractors, shopping centers, hotels, airports, railway stations and large public building operators.

This report studies the global Stone Floor Maintenance Robot production, demand, key manufacturers, and key regions.
