Abstracts

According to our (Global Info Research) latest study, the global Stone Maintenance Robot market size was valued at US\$ 8.85 million in 2025 and is forecast to a readjusted size of US\$ 44.53 million by 2032 with a CAGR of 24.9% during review period.

In 2025, global sales of Stone Maintenance Robot reached approximately 300 units, with an average market price of about USD 26000?29000 unit, an annual production capacity of roughly 350 units, and an industry-average gross margin of approximately 40%.

Stone Maintenance Robots are autonomous or semi-autonomous mobile equipment designed for the maintenance of installed stone flooring in commercial buildings, public facilities, transportation hubs, hotels, office buildings, hospitals, exhibition venues and similar high-traffic environments. A typical system integrates a robotic mobile platform, navigation and localization, path planning, obstacle avoidance and safety sensing, brush or polishing pad control, pressure regulation, chemical dosing, cleaning or recovery modules, and digital task management functions. By combining autonomous movement, controlled polishing pressure, quantified chemical application, route coverage and operational data recording, these robots convert traditionally labor-intensive stone crystallization, polishing, light restoration, de-waxing and routine floor care into a more standardized, repeatable and traceable maintenance process. This study focuses on professional robotic equipment used for post-installation stone floor care, with primary flooring materials including marble, granite, engineered stone and terrazzo, and with major end users including facility management companies, cleaning service contractors, shopping centers, hotels, airports, railway stations and large public

building operators.
