Abstracts

The global Stopper Cylinder market size is expected to reach $ 387 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

In 2025, the global production volume of Stopper Cylinder reached approximately 6.2 million units, with an average selling price of US$42/unit, a production capacity of approximately 7.8 million units, and a gross margin of 30%.

Stopper Cylinder is a pneumatic actuator used in automated conveyor systems and industrial production lines to stop, position, buffer, and control the cycle of workpieces. Driven by compressed air, it operates through stopper mechanisms that contact and block moving objects with high precision. Stopper Cylinders are widely installed in conveyor equipment, assembly lines, logistics systems, and industrial automation equipment. Based on structural designs, they can be classified into pin type, roller type, and roller lever type configurations. Some models are equipped with cushioning mechanisms to reduce impact during high-speed transportation and improve operational stability and positioning accuracy.

The global Stopper Cylinder market is experiencing steady growth driven by the development of smart manufacturing, industrial automation, and flexible production systems. Increasing demand for automated conveying and precise positioning in industries such as automotive manufacturing, electronics assembly, semiconductor equipment, logistics handling, and packaging machinery is promoting the development of Stopper Cylinders toward higher precision, greater load capacity, compact design, and integrated cushioning functions. The market is currently dominated by major pneumatic component manufacturers such as SMC, Festo, Parker Hannifin, CKD, IMI Norgren, and Airtac, while Chinese local manufacturers are gradually improving their
