Abstracts

The global Stopper Type Cylinder market size is expected to reach $ 419 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

In 2025, the global production volume of Stopper Type Cylinder reached approximately 5.8 million units, with an average selling price of US$45/unit, a production capacity of approximately 7.2 million units, and a gross margin of 32%.

Stopper Type Cylinder is a pneumatic actuator used in automated conveyor systems and production lines to stop, position, separate, and control the movement cycle of workpieces. Driven by compressed air, it operates through stopper mechanisms such as pins, rollers, or lever structures. These cylinders are widely installed in conveyors, assembly lines, logistics equipment, and industrial automation systems. Based on structural design, Stopper Type Cylinders can be classified into pin type, roller type, and roller lever type, with some models integrating cushioning mechanisms to reduce impact during high-speed workpiece transportation and improve positioning accuracy and operational stability.

In the upstream sector, the production of Stopper Type Cylinders relies on metal materials, sealing materials, pneumatic control components, and precision-machined parts. Key raw materials include aluminum alloys, stainless steel, and carbon steel, which are used for manufacturing cylinder bodies, piston rods, end covers, and mounting components. Sealing components are mainly made of rubber and polyurethane materials to ensure airtightness and durability during operation. In addition, springs, cushioning components, guide mechanisms, solenoid valves, and other supporting parts are required. Upstream suppliers mainly include metal processing companies, precision machining manufacturers, sealing component

suppliers, and pneumatic component suppliers.

In the downstream sector, Stopper Type Cylinders are mainly used in industrial automation applications, including automotive manufacturing, electronics manufacturing, semiconductor equipment, logistics conveying systems, packaging machinery, food and beverage equipment, and smart warehousing systems. On automated production lines, Stopper Type Cylinders are typically installed in conveyor systems to achieve workpiece stopping, positioning, buffering, and cycle control, improving production automation and operational efficiency. With the development of smart manufacturing, industrial robots, and flexible production lines, demand for high-precision, fast-response, and cushioned Stopper Type Cylinders continues to increase.
