Abstracts

A straddle carrier is a non-road vehicle used in port terminals to transport and stack ISO standard containers. Shuttle carriers help improve the terminal operational efficiency by decoupling ship-to-shore and yard operations. Sprinter carriers enable the long-distance transportation of horizontal containers. They carry loads at high speeds between container bridges and stacking cranes. Straddle carriers are large with a load bearing capability of over 50 tons. Smaller versions of straddle carriers are also available for users who need to move containers around their yard or depot as a by-product of their main business.

Scope of the Report:

This report focuses on the Straddle Carrier in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The advances in the container handling equipment is one of the primary growth factors for this market. Efficient container handling equipment is needed by the terminal operators to stay in business. Investments is expected to continue to increase in new fleets that can handle the growing demands of the container industry along with advances in equipment technologies that focus on the importance of straddle carriers that help in moving containers and to handle the issue of port congestion. Container growth is experiencing the highest growth compared to other regions which is caused by a lack of port handling equipment.

APAC is estimated to be the major revenue contributor to the straddle carrier market by 2023. APAC constitutes to half of the world's largest ports and has consequently

become an important target market for the stakeholders in this marketplace. The mining industry in China drives the increase of the port handling equipment which is influenced by the increased need for mined products from steel, construction, agriculture, chemical, and electrical utility.

The worldwide market for Straddle Carrier is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
