Abstracts

According to our (Global Info Research) latest study, the global Straight-length Carbon Steel Argon Arc Welding Wire market size was valued at US$ 342 million in 2025 and is forecast to a readjusted size of US$ 451 million by 2032 with a CAGR of 4.0% during review period.

Straight-length Carbon Steel Argon Arc Welding Wire consists of solid filler metal rods based on low-carbon or carbon-manganese steel. Produced through processes such as wire drawing, surface treatment, straightening, and precision cutting, these wires are manually fed into the weld pool by the welder during the TIG welding process. Typically used with pure argon shielding, the wire itself does not serve as the arc electrode. Mainstream products comply with AWS A5.18, ASME SFA-5.18, or ISO 636 standards; representative grades include ER70S-2, ER70S-3, ER70S-6, and ER70S-G. Key applications include root pass welding for oil, gas, and industrial pipelines; refinery and chemical processing units; boilers and pressure vessels; storage tanks; shipbuilding and offshore engineering; bridge and building steel structures; automotive and rail vehicles; construction and agricultural machinery; sheet metal fabrication; and industrial equipment maintenance. They are particularly suitable for welding scenarios requiring low heat input, minimal spatter, clean weld beads, high weld cleanliness, and suitability for radiographic or ultrasonic testing. The upstream supply chain primarily comprises low-carbon and carbon-manganese steel wire rods; ferro-manganese and ferro-silicon; deoxidizers (such as aluminum, titanium, and zirconium); copper coating materials; pickling agents; wire-drawing lubricants; molds; and packaging materials (plastic tubes, cartons, and moisture-proof packaging). The midstream process involves molten steel composition control, wire rod rolling, pickling/descaling, multi-pass drawing, annealing, surface treatment (copper-coated or copper-free), straightening, precision cutting, end

finishing, chemical composition analysis, tensile and impact testing of deposited metal, batch identification, and packaging. Finally, the downstream sector reaches markets—including energy pipelines, pressure equipment, shipbuilding, construction, automotive, and machinery manufacturing and maintenance—through welding consumable distributors, industrial gas suppliers, TIG welding equipment manufacturers, and welding engineering service providers.
