A strap varistor is a type of voltage-dependent resistor that provides protection against transient overvoltage in electronic circuits. It consists of a ceramic disc that is coated with a metal oxide material such as zinc oxide. The ceramic disc is then connected to two metallic leads that are sealed with an insulating material.

When a transient voltage surge occurs, the strap varistor responds by rapidly changing its resistance and effectively absorbing the excess voltage. This helps prevent damage to sensitive electronic components such as integrated circuits, and helps maintain the overall performance and reliability of the circuit.

Strap varistors are commonly used in applications such as power supplies, telecommunications equipment, consumer electronics, and industrial equipment. They are available in various sizes, shapes, and electrical specifications to meet the specific requirements of different applications.
