Abstracts

A strategic bomber is a medium to long range penetration bomber aircraft designed to drop large amounts of air-to-ground weaponry onto a distant target for the purposes of debilitating the enemy's capacity to wage war. Unlike tactical bombers, penetrators, fighter-bombers, and attack aircraft, which are used in air interdiction operations to attack enemy combatants and military equipment, strategic bombers are designed to fly into enemy territory to destroy strategic targets. In addition to strategic bombing, strategic bombers can be used for tactical missions.

Scope of the Report:

This report focuses on the Strategic Bomber in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing utilization of strategic bombers in maritime military drills/patrols due to the changing nature of modern warfare is expected to be one of the primary drivers for market growth. The extensive usage of strategic bombers for facilitating military drills, maritime patrols, and to drop heavy air-to-ground weaponry will lead to the development of innovative support sub-systems for strategic bombers. In recent times, there has been a requirement for the installation of padded active electronically scanned array (AESA) radar in the bomber division as they allow the aircraft to operate in both in adverse weather conditions and contested environments. Such advancements in technology and its extensive usage for a wide array of military applications lead to the strong growth of the market during the estimated period.

During 2017, the Americas was the largest market for strategic bombers and dominates the total market share. Increasing investments of the Department of Defense (DoD) in the procurement, sustainment, and modernization of advanced strategic bombers will aid in the growth of this market in the Americas.

The worldwide market for Strategic Bomber is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
