Abstracts

According to our (Global Info Research) latest study, the global Straw Bending Machine market size was valued at US\$ 154 million in 2025 and is forecast to a readjusted size of US\$ 215 million by 2032 with a CAGR of 4.9% during review period.

Straw bending machine was developed to addresses the functionality and convenience limitations of straight straws in various usage scenarios. The demand primarily stems from the direct needs of downstream industries such as catering, healthcare, and food packaging for pre-formed bent straws—for example, the catering industry requires bent straws for customers to drink from cups, and the medical field requires customized catheters for clinical use. Upstream, it processes straw raw materials (such as plastic particles and pulp) into straight semi-finished products after extrusion and slitting; downstream, it connects with packaging, sterilization, and distribution stages, becoming a key processing node in the transition of straws from standardized production to scenario-based customization. In 2025, the production volume of straw bending machines was approximately 50,000 units, with an average price of approximately US\$3,000 per unit, a gross profit margin of approximately 35%, and a single-line capacity of 600 units per year.
