According to our (Global Info Research) latest study, the global Straw Briquetting System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Straw briquetting machine is a piece of equipment used to convert straw and other agricultural biomass residues into compacted briquettes. It applies pressure to compress the straw material, binding it together to form briquettes of various shapes and sizes. They provide a sustainable way to utilize agricultural residues like straw, which would otherwise go to waste or be burned. The compacted briquettes have higher density and energy content than loose straw, making them more efficient for storage, transport, and use as a fuel source.
