The global Straw Crushing and Returning Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Straw Crushing and Returning Machine is a kind of agricultural machinery that can crush and return crop straw to the field. It uses the high-speed rotation of the cutter shaft to drive the boring tool to cut the straw, and then brings the cut straw into a closed cavity formed by a hood baffle. Under the action of cutting, impacting and tearing of the fixed knife installed on the file and the hood, the straw is crushed and thrown onto the surface to achieve the purpose of returning the straw to the field. It can improve soil fertility, increase organic matter, reduce environmental pollution, and save labor and resources.
